

Resource List

LLM Benchmarks & Leaderboards

- **Artificial Analysis** – Independent LLM benchmarks and performance comparisons
<https://artificialanalysis.ai/>
- **LLM Arena** – Human preference-based model leaderboard (Chatbot Arena)
<https://lmarena.ai/leaderboard>

☁ Model Providers & Routing

- **OpenRouter** – Unified API for accessing multiple LLM providers
<https://openrouter.ai/>
- **DeepSeek** – Advanced open-source and proprietary LLM provider
<https://www.deepseek.com/>
- **Groq** – Ultra-fast AI inference platform
<https://groq.com/>
- **OpenAI Platform** – Developer platform and API management
<https://platform.openai.com/playground>
- **ChatGPT** – OpenAI's consumer chat interface
<https://chatgpt.com/>
- **Anthropic Console** – Developer dashboard for Claude models
<https://console.anthropic.com/dashboard>
- **Anthropic Models** – Overview of available Claude models
<https://docs.anthropic.com/en/docs/about-claude/models>
- **Google AI Studio** – Prototyping environment for Gemini models
https://aistudio.google.com/prompts/new_chat
- **Meta for Developers** – Facebook/Meta AI resources
<https://developers.facebook.com/>

🧠 Prompt Engineering & Optimization

- **OpenAI Prompt Optimizer** – Tool to optimize system prompts (GPT-5/4o)
<https://platform.openai.com/chat/edit?models=gpt-5&optimize=true>
- **OpenAI Tokenizer** – Check token usage for text strings
<https://platform.openai.com/tokenizer>
- **ElevenLabs Prompting Guide** – Best practices for conversational voice agents
<https://elevenlabs.io/docs/conversational-ai/best-practices/prompting-guide>

- **Anthropic Prompt Caching** – Guide to reducing costs/latency via caching
<https://www.anthropic.com/news/prompt-caching>

Local LLM & AI Runtimes

- **Ollama** – Run LLMs locally via a simple CLI
<https://ollama.com/>
- **Ollama Commands** – Official CLI command reference (GitHub)
<https://github.com/ollama/ollama/blob/main/README.md>
- **LM Studio** – Desktop GUI for running local LLM inference
<https://lmstudio.ai/>
- **Anything LLM** – Full-stack local RAG and LLM workspace
<https://useanything.com/>
- **Open WebUI** – Feature-rich, self-hosted web interface for LLMs
<https://github.com/open-webui/open-webui>
- **Pinokio** – One-click browser-based installer for various AI tools
<https://pinokio.co/>

Agent Frameworks & Platforms

- **LangChain** – Comprehensive framework for building LLM applications
<https://www.langchain.com/>
- **LangGraph** – Library for building stateful, multi-actor applications
<https://www.langchain.com/langgraph>
- **Langflow** – Visual drag-and-drop builder for LangChain apps
<https://www.langflow.org/>
- **Flowise** – Open-source low-code tool for developers to build LLM apps
<https://flowiseai.com/>
- **Flowise (GitHub)** – Source code for Flowise
<https://github.com/FlowiseAI/Flowise>
- **Microsoft AutoGen** – Framework for enabling multiple agents to converse
<https://microsoft.github.io/autogen/stable/>
- **CrewAI** – Framework for orchestrating role-playing autonomous AI agents
<https://www.crewai.com/>
- **OpenAI Swarm** – Experimental, lightweight multi-agent orchestration
<https://github.com/openai/swarm>
- **Dify** – Open-source LLM app development platform
<https://dify.ai/>

- **Voiceflow** – Platform for building conversational AI and voice agents
<https://www.voiceflow.com/>
- **Botpress** – Visual builder for creating AI chatbots
<https://botpress.com/>
- **Stack AI** – No-code interface for building AI workflows
<https://www.stack-ai.com/>
- **VectorShift** – Enterprise-grade AI workflow automation
<https://vectorshift.ai/>
- **Manus** – Platform for autonomous AI agents
<https://manus.im/app>
- **Lindy** – AI employee/assistant for productivity
<https://www.lindy.ai/>
- **Lovable** – AI-powered application builder
<https://lovable.dev/>
- **Base44** – AI-first software development platform
<https://base44.com/>
- **Devin** – The first fully autonomous AI software engineer
<https://devin.ai/>

Pydantic AI

- **PydanticAI Docs** – Official documentation
<https://ai.pydantic.dev/>
- **PydanticAI (GitHub)** – Framework source code
<https://github.com/pydantic/pydantic-ai>
- **My Deep Research Agent** – Pydantic AI research agent
<https://github.com/Arnie936/Pydantic-AI-Deep-Research-Agent>

MCP (Model Context Protocol)

- **Introduction to MCP** – Official announcement by Anthropic
<https://www.anthropic.com/news/model-context-protocol>
- **MCP Documentation** – Official protocol specification and guide
<https://modelcontextprotocol.io/introduction>
- **Claude MCP Hub** – Central resource for Claude Desktop MCP integrations
<https://www.claudemcp.com/>

- **Official MCP Servers** – Reference implementations by the MCP team
<https://github.com/modelcontextprotocol/servers>
 - **MCP Server Directory** – Community index of available MCP servers
<https://mcp.so/>
 - **Awesome MCP Servers** – Curated list of community MCP servers
<https://github.com/punkpeye/awesome-mcp-servers>
 - **MCP Installer** – Tool to easily install MCP servers
<https://github.com/anaisbetts/mcp-installer>
 - **MCP Prompt Templates** – Collection of reusable prompts for MCP
<https://github.com/mikeskarl/mcp-prompt-templates>
 - **Blender MCP** – Control Blender 3D via MCP
<https://github.com/ahujasid/blender-mcp>
 - **Security: Tool Poisoning** – Research on MCP security risks
<https://invariantlabs.ai/blog/mcp-security-notification-tool-poisoning-attacks>
 - **MCP Scanner** – Security auditing tool for MCP servers
<https://github.com/invariantlabs-ai/mcp-scan>
- My MCP Example Repo (Arnie936)** – Practical MCP implementation examples
<https://github.com/Arnie936/Agentic-MCP>

RAG, Vector Databases & Data Processing

- **Pinecone** – Managed vector database platform
<https://www.pinecone.io/>
- **Supabase** – Open source Firebase alternative with pgvector support
<https://supabase.com/>
- **LlamaParse** – Efficient parsing of PDFs/Documents for RAG
https://github.com/run-llama/llama_parse
- **LlamaCloud** – Managed services for LlamaIndex and parsing
<https://cloud.llamaindex.ai/>
- **LlamaParse Colab Notebook** – Hands-on example for parsing
<https://colab.research.google.com/drive/1P-XpCEt4QaLN7PQk-d1irliWBsVYMQI5>
- **LightRAG** – Simple and fast RAG framework
<https://github.com/HKUDS/LightRAG>
- **GraphRAG** – Microsoft's approach to graph-based RAG
<https://microsoft.github.io/graphrag/>

- **CAG (Cache Augmented Generation)** – Optimization technique for generation
<https://github.com/hhhuang/CAG>
- **Contextual Retrieval** – Anthropic’s guide on improving RAG retrieval
<https://www.anthropic.com/news/contextual-retrieval>
- **NotebookLM** – Google’s RAG-based notebook for research
<https://notebooklm.google/>

Voice, TTS & Realtime AI

- **ElevenLabs** – Leading AI voice and text-to-speech platform
<https://elevenlabs.io/>
- **LiveKit Cloud** – Infrastructure for realtime audio/video AI agents
<https://cloud.livekit.io/>
- **LiveKit (GitHub)** – Open Source WebRTC stack
<https://github.com/livekit/livekit>
- **LiveKit Agents Docs** – Documentation for building voice agents
<https://docs.livekit.io/agents/start/voice-ai/>
- **Vapi** – Developer platform for voice AI agents
<https://vapi.ai/>
- **Retell AI** – Conversational voice AI for phone calls
<https://www.retellai.com/>
- **Ultravox** – Realtime multimodal voice AI model
<https://www.ultravox.ai/>
- **Synthflow** – No-code voice assistant builder
<https://synthflow.ai/>
- **Leaping AI** – AI voice solutions
<https://leapingai.com/de/>
- **Fish Speech** – Open-source text-to-speech model
<https://github.com/fishaudio/fish-speech>
- **Pipecat** – Framework for building voice/multimodal agents
<https://github.com/pipecat-ai/pipecat>
- **Rime** – Low latency, high quality TTS
<https://www.rime.ai/>
- **Vonage** – Communications APIs (often used with AI voice agents)
<https://www.vonage.com/>
- **Tavus** – Video generation and digital twin platform
<https://www.tavus.io/>

- **Tavus & LiveKit Integration** – Docs for avatars with LiveKit
<https://docs.tavus.io/sections/integrations/livekit>
- **LiveKit Assistant Example (svpino)** – Voice assistant reference implementation
<https://github.com/svpino/livekit-assistant/tree/main>
- **My LiveKit Avatar Repo (Arnie936)** – LiveKit with Avatar integration
<https://github.com/Arnie936/LiveKit-with-Avatar>

Automation & Orchestration

- **n8n** – Workflow automation tool (Self-hosted & Cloud)
<https://n8n.io/>
- **n8n (GitHub)** – Source code for self-hosting
<https://github.com/n8n-io/n8n>
- **n8n Workflows** – Hub with 8.000 Templates
<https://n8n.io/workflows/>
- **n8n License FAQ** – Info on fair code and sustainable use
<https://docs.n8n.io/sustainable-use-license/>
- **Zapier** – Popular no-code automation platform
<https://zapier.com/>
- **Make** – Visual automation and integration platform
<https://www.make.com/en>
- **Render** – Cloud hosting platform (good for hosting agents/n8n)
<https://render.com/>
- **n8n Hosting (Hostinger)** – VPS solutions optimized for n8n
<https://www.hostinger.com/vps/n8n-hosting>

Image, Video & 3D Generation

- **ComfyUI** – Node-based GUI for Stable Diffusion
<https://www.comfy.org/>
- **CivitAI** – Hub for sharing AI art models and LoRAs
<https://civitai.com/>
- **Replicate** – Cloud API to run open-source AI models
<https://replicate.com/>
- **Blender** – 3D Creation Suite (required for Blender MCP)
<https://www.blender.org/download/>

Developer Tools & IDEs

- **Cursor** – AI-first code editor (VS Code fork)
<https://cursor.com/>
- **Visual Studio Code** – The standard code editor
<https://code.visualstudio.com/>
- **Google Antigravity** – Experimental AI-native code editor
<https://antigravity.google/>
- **Docker** – Containerization platform
<https://www.docker.com/>
- **Git** – Version control system
<https://git-scm.com/>
- **BotFather** – Telegram Bot management tool
<https://telegram.me/BotFather>

Programming Languages & Package Managers

- **Python** – Primary language for AI development
<https://www.python.org/> (Downloads: <https://www.python.org/downloads/>)
- **uv (Astral)** – Extremely fast Python package installer and manager
<https://docs.astral.sh/uv/>
- **pip** – Standard package installer for Python
<https://pypi.org/project/pip/>
- **pyenv** – Python version management tool
<https://github.com/pyenv/pyenv>
- **Node.js** – JavaScript runtime
<https://nodejs.org/en> (Downloads: <https://nodejs.org/en/download>)
- **NVM for Windows** – Node version manager for Windows
<https://github.com/coreybutler/nvm-windows>

Web Access & Scraping

- **Tavily** – Search API optimized for LLM agents
<https://tavily.com/>
- **Firecrawl** – Turn websites into clean markdown for AI
<https://www.firecrawl.dev/>

Legal & Compliance

- **EU AI Act (Official)** – Official website for the EU AI Act
<https://artificialintelligenceact.eu>
- **OpenAI Data Residency** – Info on GDPR compliance and EU data hosting
<https://openai.com/index/introducing-data-residency-in-europe/>

Hardware & Utilities

- **GPU-Z** – Graphics card information utility
<https://www.techpowerup.com/download/techpowerup-gpu-z/>
- **CPU-Z** – Processor and system information utility
<https://www.techpowerup.com/download/cpu-z/>
- **WeatherAPI** – Simple API for weather data
<https://www.weatherapi.com/>
- **Format Converters:**
 - **CSV to Markdown:** <https://www.convertcsv.com/csv-to-markdown.htm>
 - **PDF to Markdown:** <https://pdf2md.morethan.io/>
 - **HTML to Markdown:** <https://codebeautify.org/html-to-markdown>
- **Julia/Markdown Tip** – How to include raw HTML in Julia Markdown
<https://discourse.julialang.org/t/including-raw-html-in-julia-markdown/26165>

Research Papers (ArXiv & PDFs)

- **NotebookLM Paper** – *NotebookLM: A Notebook with LLM*
<https://arxiv.org/pdf/2410.10869>
- **KAG Paper** – *Knowledge Augmented Generation*
<https://arxiv.org/pdf/2409.13731>
- **Other Research Papers** – (Collection of ArXiv links provided)
 - <https://arxiv.org/html/2506.23260v1>
 - <https://arxiv.org/abs/2506.07402>
 - <https://arxiv.org/html/2402.13459v1>
 - <https://arxiv.org/abs/2308.14367>
 - <https://arxiv.org/pdf/2407.04295>
 - <https://arxiv.org/abs/2306.05499>
